

KONSTANTIN NIKOLAEV

FULL-STACK SOFTWARE ENGINEER

Sherman Oaks, CA • (805) 460-8670 • konstantin@nikolaev.us
linkedin.com/in/konn • github.com/nikolaevK • knikolaev.com

PROFESSIONAL SUMMARY

Full-stack software engineer who architects and ships production applications end-to-end, from database and API design to polished React front-ends. Experienced across the modern TypeScript stack — Next.js, React, and Node.js — building secure multi-tenant platforms, real-time features, payment and third-party integrations, and AI-powered tooling. Comfortable owning projects solo — gathering requirements from stakeholders, researching the problem space, and translating business needs into reliable, well-structured systems. Dual background in economics and management supports cross-functional work across product, sales, finance, and operations.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), SQL, HTML/CSS

Frameworks & UI: Next.js (App Router), React, Node.js, Tailwind CSS, shadcn/ui, TanStack Query, Recharts

Data & Backend: SQLite (Turso/libSQL), PostgreSQL, MongoDB, Prisma, REST APIs, GraphQL, Webhooks

AI & Integrations: Anthropic Claude, Google Gemini, Meta (Facebook) Ads API, Google Calendar, GoHighLevel CRM, DocuSeal, Figma embeds

Strengths: Full-app architecture, dashboards & data visualization, AI feature development, third-party integrations, Agile/Scrum, Git/GitHub

Cross-Functional: Stakeholder requirements gathering, technical research & scoping, business-logic modeling, working across product, sales, finance & operations

PROFESSIONAL EXPERIENCE

Full-Stack Software Engineer

Agency Collective

Jan 2026 – Present

Remote

- Designed and built the entire platform end-to-end as sole engineer — three tailored web apps in one product: an agency admin dashboard, a client portal, and a sales-team portal, each showing only the data and tools that role should see.
- Worked directly with company stakeholders to gather and define requirements for each feature and product — translating business goals, client needs, and operational workflows into clear technical specs, then scoping, prioritizing, and planning delivery.
- Researched each problem space, third-party API, and technology before building — comparing approaches, weighing trade-offs, and choosing the right tools so features fit the business and integrations worked reliably.
- Modeled real business logistics into the product — billing cycles, commission and payout rules, appointment scheduling, and client onboarding — bridging finance, sales, and operations to keep the software aligned with how the company actually runs.
- Built the Meta (Facebook) Ads analytics dashboards — KPI cards (spend, ROAS, clicks, conversions, cost-per-result) with drill-downs from account → campaign → ad set, performance charts, and an alert feed that automatically flags problems like stalled spend or a broken pixel.
- Shipped AI-powered features on Anthropic Claude and Google Gemini — a chat “AI Analyst” that answers plain-English questions about ad performance by pulling live data, plus AI ad-copy writing and AI image generation for creative ideation.
- Built the client-facing portal where each client sees their own ad metrics, chats with the AI analyst, views an embedded Figma design board, messages the team through live support chat, and follows an onboarding checklist and customizable welcome kit.
- Built the sales pipeline / CRM tooling — deal tracking, commission and payout calculation, team leaderboards, and a shared calendar that syncs appointment status two-way with GoHighLevel and Google Calendar.
- Built a full billing suite — recurring-invoice scheduling with due/overdue reminders, one-click PDF invoice generation and email, e-signature contracts, and automatic matching of incoming payments to the right client.

- Built internal team tools — a shared document workspace and an SOP builder with a drag-and-drop block editor, live preview, one-click PDF export, and the ability to import existing PDFs, Word docs, and Markdown and turn them into editable documents.
- Owned the full stack and product decisions — data model, APIs, UI, and third-party integrations (Meta, Google, GoHighLevel, DocuSeal e-sign) — across a large TypeScript codebase, with a built-in documentation section for every feature.

Tech: *TypeScript · Next.js · React · Node.js · SQLite (Turso) · REST APIs · Anthropic Claude · Google Gemini · Meta / Google / GoHighLevel APIs · TanStack Query · Tailwind · Recharts*

SELECTED PROJECTS

Dynamic E-Commerce Platform — Next.js, TypeScript, PlanetScale/SQL, Prisma, Stripe, Tailwind

- Built a full storefront plus an integrated admin dashboard for store customization, product/category management, and sales & revenue analytics.
- Implemented secure user authentication, product catalog, Stripe payment processing, and internal REST API routes (GET/POST/PUT/DELETE) with Prisma data access.

Real-Time Messenger — Next.js, GraphQL, Prisma, MongoDB, WebSockets

- Delivered real-time messaging with WebSockets and GraphQL subscriptions, backed by a Prisma/MongoDB data layer for users, conversations, and messages.
- Implemented secure authentication and authorization for protected access across the app.

Blogging / CMS Platform — React, Next.js, Firebase, Tailwind

- Created a platform for authoring, managing, and publishing blogs with Firebase auth, database services, and a commenting system driving reader engagement.

EDUCATION

California State University, Northridge

Northridge, CA • 2017 – 2021

B.A. Economics, Cum Laude • B.S. Management, Cum Laude

- GPA 3.65 • Dean's List honoree (multiple semesters), David Nazarian College of Business & Economics
